

OSCARS
Open Science Clusters' Action
for Research & Society

Funded Project

CodeMetaSoft

Principal Co-Investigator: **Daniel Garijo**, Universidad Politécnica de Madrid

Principal Co-Investigator: **Thomas Vuillaume**, Laboratoire d'Annecy de Physique des Particules, CNRS

Project team members: Tom Francois, Anas el Hounssi, Esteban González Guardia

Implemented by

Funded by
the European Union

Improving Research Software metadata good practices across OSCARS science clusters

OSCARs Funding:

€ 250000

Project Start:

01-Nov-2024

Project End:

01-Nov-2026

Field:

All clusters
Research Software
Metadata

Principal Investigators:

Daniel Garijo, UPM
Thomas Vuillaume, LAPP

Other Researchers involved:

Tom Francois, LAPP
Anas el Hounsi, UPM
Esteban González, UPM

Challenge addressed

Ease the adoption of Research Software metadata & good practices

Automate metadata propagation and interoperability

Propose suggestions for researchers

Step 1

Assess the current adoption of practices

Step 2

Gap analysis and pitfall collection

Step 3

RS Metadata enrichment methodology

Step 4

Implement suggestions on Science clusters repos

Step 5

Demos in OSSR, workflows, actions

IMPACT

Improving metadata adoption and FAIR4RS principles in European Science clusters, increase the adoption of CodeMeta as a Research Software metadata standard

Organisations involved:

Research Software metadata are a core element of FAIRness.

- Sources of software metadata are often project or platform specific.
 - setup.py, setup.cfg in python
 - pom.xml in Java
 - README.md
 - ...
- CodeMeta is becoming the metadata standard for software metadata.

- Software metadata is currently disseminated in heterogeneous files and documentation
- Lack of automated suggestions and enrichment for improving software metadata

Proposed Solution

- Integrate and enrich Research Software (RS) metadata records
- Tools to ease metadata compliance, propagation and automated suggestions and enrichment
- Automate RS metadata maintenance workflows
- Means to measure metadata gaps and the adoption of best practices
- Methodology for RS enrichment
- Demonstrators through clusters and [OSSR](#)

Auto-codemeta wizard: <https://autocodemeta.linkeddata.es/>

Metadata pitfall catalog (in review at MSR 2025) 18 pitfalls, 10 warnings.

Pitfall detection tool: <https://github.com/Anas-Elhounsi/RsMetaCheck>

Bot for continuous integration fixes: (being evaluated)

https://gitlab.com/escape-ossr/rs_quality_checks

- What is going to change thanks to your project?
 - CodeMeta **maintenance in software repositories is simplified**. As a result its adoption in the Science Clusters increases, making software more FAIR globally.
 - **Gaps in metadata are identified in software catalogues**, helping Science Clusters focusing their efforts where they are most needed
- Resources that will be made available:
 - Open service(s) and actions usable by others from any community
- Sustainability:
 - Rely on **existing tooling** (e.g., CodeMeta generator) and **standards** (CodeMeta)
 - The developed solution and results will be open-source and published in Zenodo to be (re)usable by anyone.
- A first landscape analysis of good practices has been accepted at MSR'25 [1]
